RDAP: For more information on Registration Data Access Protocol (RDAP), please visit: rdap.nic.sucks or lookup.icann.org

Terms of RDAP Use: No user of RDAP is allowed to use automated and/or electronic processes that send high volume to the services. To protect the privacy of our registrants, and the integrity of the service, we have imposed limits on the number of queries that may be made. In general, we allow up to 100 queries per hour from the same IP, but we can amend these limits at any time. If the query limit is exceeded, the IP address will be prevented from making additional queries for a period of 24 hours. We may consider exemptions to the query limits described in this section for parties with a legitimate need, such as law enforcement, government agencies, or regulatory bodies.

WHOIS: For more information on WHOIS, please visit https://whois.icann.org. For more information on WHOIS status codes, please visit https://icann.org/epp.

Terms of WHOIS Use: Users accessing this WHOIS service must agree to use the data only for lawful purposes, and under no circumstances use the data to: Allow, enable, or otherwise support the transmission by e-mail, telephone, or facsimile of mass unsolicited, commercial advertising or solicitations to entities other than the registrar's own existing customers. Enable high volume, automated, electronic processes that send queries, or data to the system or any ICANN-accredited registrar, except as reasonably necessary to register domain names or modify exiting registrations. When using this WHOIS service, please consider the following: The WHOIS service is not a replacement for standard EPP commands to the SRS service. WHOIS is not considered authoritative for registered domain objects. The WHOIS service may be scheduled for downtime during production or OT&E maintenance periods. Queries to the WHOIS services are throttled. If too many queries are receive from a single IP address within a specified time, the service will being to reject further queries for a period of time to prevent disruption of WHOIS service access.
